

Windows 11: Updating

Intro

Consistently updating your laptop is the easiest way to keep your laptop running as smoothly as possible. When these updates build up, they can cause some pretty significant system lag.

By following these steps at least **once a week**, it will ensure that the laptop is up to date.

How To

Click on the icon circled in red to the right.

Click on Settings.

When the Settings screen opens, click on Windows Update in the list on the left-hand side.

Click Check Now in the top right. Or Download Now if there are updates queued.

For additional updates, select Advanced Options out of the more options section.

Click on Optional Updates.

Select each of the updates you would like to install, then click Download & install.
