

Updating Apps on an Agency iPhone/iPad

Like installing iOS updates, updating your apps increases the performance and security of the app. This is an easy task that should be done every so often to ensure that all of your apps are up to date.

1. Start by locating your app catalog (circled in red) on your agency iPhone/iPad. Once found click on the icon.

2. When the app catalog open you will be presented with a screen similar to the one on the right. Any app that needs updating will have a red “update” button, as circled in red.

3. You will be prompted with this screen after selecting “update”. Click on the Ok button. This update will take a minute to initiate. Go through and update each of your apps that have updates available. Be sure to check periodically for future updates.
